

Smart Money Concepts (SMC) Trading Course Overview

Welcome to the Smart Money Concepts (SMC) Trading Course. This course is designed to give you a complete, practical, and step-by-step understanding of how the market truly works. We combine historical wisdom, modern trading methods, and my personal experience to provide you with a learning experience that is both deep and practical. The goal is not just to teach theory, but to ensure you can apply it in real market conditions with confidence.

What is SMC?

Smart Money Concepts (SMC) is a trading methodology that focuses on understanding the behavior of institutional traders — the 'smart money' — and learning to trade in harmony with their strategies. It involves identifying market structures, liquidity zones, and high-probability entry points based on how smart money operates. SMC allows traders to see the market with more clarity and accuracy than traditional retail trading methods.

The Story Behind SMC

The concepts behind SMC draw inspiration from several key influences in trading history. It includes the theories of Richard Wyckoff, which analyze market cycles and institutional footprints; the methods of the ICT (Inner Circle Trader), which provide structure-based and liquidity-driven approaches; and more modern refinements. In this course, these foundations are enhanced with my personal trading experience and unique entry methods developed over years of studying and trading the markets.

Course Content Overview

The course begins with basic market structure and builds up to advanced strategies, ensuring you understand each concept before moving on.

We will cover:

- Market Structure Basics to Advanced: Understanding HH, HL, LL, LH using the mechanical structure method.

Accept the change

- Pullbacks: Identifying pullbacks vs valid pullbacks.
- IDM (Internal and External Structure): Reading market flow on different levels.
- BOS and CHOC: Break of Structure and Change of Character, identifying shifts in market direction.
- Order Blocks (OB): Valid OBs, Extreme OBs, and how to spot them.
- Imbalance/FVG and Liquidity Voids: Understanding and identifying market inefficiencies.
- Points of Interest (POI): Where to focus for potential trades.

After establishing structure, we move into entries:

- Risk-to-Reward Ratio
- Premium and Discount Concepts
- Liquidity Concepts
- Order Flow Mitigation
- Different Entry Types: Fibonacci, Extreme POI, Inducement, Confirmation, Flip Zone, SMS, Chart Pattern + SMC, and more.
- Theory vs Practical Reality: Understanding how the market behaves differently in live conditions compared to theory.
- Trade Management: Executing strategies properly with discipline.

All concepts are demonstrated in the live market, showing exactly how to apply them step-by-step, with no gimmicks — only proven techniques.

Final Recommendation

To fully benefit from this trading methodology, it is strongly recommended to watch the entire course in sequence. Each lesson builds on the previous one, creating a complete understanding of Smart Money Concepts. Skipping sections may leave gaps in your knowledge and reduce your ability to apply these methods effectively in real market conditions.
